

Long Island Optometric Eyecare,PC

In our continuing efforts to assure the best in patient care, Dr. Bacaris will now be taking digital photos of the back of your eyes as a routine part of your comprehensive eye examination.

This screening is important not only for sight-related diseases such as glaucoma, macular degeneration and retinal detachments, but can also reveal other conditions such as diabetes, high blood pressure, risks of stroke and even brain tumors.

If any abnormalities are detected during the screening, Dr. Bacaris will submit the diagnostic fee to your medical insurance provider; otherwise, there will be a nominal fee of **\$39.**

The importance of this screening is paramount to the health of your eyes and will be administered unless you inform Dr. Bacaris that you wish to opt out during your eye examination.

Thank you

I have read and understand the above
